PROFILE

Full-Stack Developer & AI Engineer experienced in building cross-platform applications across web, mobile, and desktop. I design end-to-end solutions from React.js and Flutter interfaces through to Node.js and Python backends and cloud services such as Firebase and Supabase, including AI model integration like face recognition and locally hosted LLMs. Backed by a background in IT Support and field engineering (IoT, RFID, industrial machine automation), I troubleshoot both hardware and software quickly and ship systems that hold up in daily operations.

WORK EXPERIENCE

XQUEST WAHANA 5D — PT GARUDAFOOD SUMEDANG

IT / Technical Support

2025 — Present

A 5D entertainment attraction project by PT Garudafood Sumedang. Implemented 5D gaming systems on videotron displays, automated the attraction using IoT technology, integrated RFID systems and various sensors, and maintained both hardware and software systems.

IoT | RFID | Automation | Sensors | Videotron | Networking

PT ZEINTOUR INTERNATIONAL

Full Stack Web Developer

2023 — Present

Led a team in developing and maintaining web applications using React.js, Tailwind CSS, and Node.js. Implemented the Google Sheets API for online registration, handled both front-end and back-end development, and integrated third-party services to support business processes. Collaborated with stakeholders to define project requirements and timelines.

React.js | Node.js | Tailwind CSS | Google Sheets API

PT INDOGILI ORZORA

Knitting Machine Operator & Technician

2021 — 2025

Operated and maintained three types of industrial circular knitting machines — Jingmei (2015), Mayer & Cie (2015), and Huixing Machine Co., Ltd. Sishi (2024). Worked to industry standards, carried out preventive maintenance, and diagnosed and resolved technical faults quickly to keep production running.

Jingmei | Mayer & Cie | Huixing Sishi | Preventive Maintenance

EDUCATION

MA Mathla'ul Anwar Sukaguna
Senior High School
2016 — 2018

SKILLS

FRONTEND

- React.js
- Flutter
- Dart
- JavaScript
- Tailwind CSS
- HTML5
- CSS3
- Vite
- Framer Motion

BACKEND & CLOUD

- Node.js
- Python
- FastAPI
- Firebase
- Firestore
- Supabase
- Google Cloud
- REST API

PROJECTS

Garudashield Visit STABLE

An integrated biometric AI-powered visitor management and access control ecosystem. Features an Android guest app (Flutter) for onboarding via Google Sign-In & OTP, multi-angle face enrolment with Google ML Kit & real-time face quality gating, safety induction quiz, and digital signatures. Supported by a Linux Desktop Gate terminal (MediaPipe sidecar) for hands-free gate auto-identification, and a high-performance FastAPI AI backend powered by YOLOv8-Face, ArcFace 512-D ONNX Runtime, and pose-robust embedding matching.

Flutter · FastAPI · Python · YOLOv8 · ArcFace 512D · ONNX Runtime · Google ML Kit · MediaPipe · OpenCV

Garuda Shield FaceID STABLE

A face-recognition visitor management system combining a Flutter Windows desktop app for check-in/check-out scanning, a React web form opened from unique QR links, Firestore, digital signatures, and PDF/Excel exports.

Flutter Desktop · React.js · Vite · Firebase · Firestore · OpenCV · ArcFace 512D

Garuda Shield E-Patrol STABLE · GOOGLE PLAY

A security patrol platform combining a Flutter mobile app for GPS-based location check-ins, field photo evidence, shift-based patrol workflows, and account management, with a React admin dashboard for monitoring patrol history, reviewing storage archives, managing locations, and exporting operational reports. The app has been released and is publicly available on the Google Play Store.

Flutter · React.js · Vite · Firebase · Firestore · Geolocator · Excel Export

Chocolatos X-Quest Agentic AI IN PROGRESS

The Captain Arion and Captain Celestia mobile companion app for Chocolatos X-Quest. An AI chat interface powered by Gemma 4 E2B + Ollama as the AI backend, running on a self-hosted server with an RTX 3060 12GB and exposed via Ngrok. Features markdown support, local data synchronisation, issue tracking, and CCTV feed scanning.

Flutter · Dart · Gemma 4 E2B · Ollama · Python · Ngrok

Web Officer Tracking STABLE

A web application for monitoring officer performance in real time, accessible through a shared link for authorised users. Integrated with a Flutter WebView to prevent URL re-entry and hide the web address. Records activity timing, supports full CRUD operations, and exports reports to Excel.

React.js · Flutter · Tailwind CSS · Firebase · Framer Motion

Chocolatos Sumedang Café Website STABLE

A café menu catalogue website for Chocolatos Sumedang, accessed by scanning a unique QR code on site. Designed around Chocolatos' visual identity so guests can browse the menu anytime without installing an app.

React.js · Tailwind CSS · Framer Motion

Knitting Machine Instant Efficiency STABLE

An application for monitoring circular knitting machine efficiency, converting RPM into percentages and minutes based on working hours so operators can assess machine performance at a glance.

Flutter · Android Studio

AI & COMPUTER VISION

- Ollama
- Gemma
- OpenCV
- ArcFace 512D
- YOLOv8
- MediaPipe
- Google AI Studio
- Prompt Engineering

TOOLS

- Git
- GitHub
- Figma
- Android Studio
- WordPress
- Ngrok

IT SUPPORT & ENGINEERING

- Helpdesk & remote support
- Hardware/software troubleshooting
- IT inventory management
- Data backup
- PC spec consulting
- IoT & RFID
